

Adult Caddisfly Occurrence Scheme

2019

Stuart M Crofts

The Stuart Crofts Adult Caddisfly Occurrence Scheme

Background

For as long as I can remember I have had an interest in insects, as a boy I would spend my summer holidays catching butterflies, hunting down grasshoppers and feeding hapless flies to hungry spiders. When I started fly-fishing a detailed study of the insects that the fish I was trying to catch actually fed on, was for me, just a natural development. I have since spent many years collecting and studying the mayflies (Ephemeroptera) and stoneflies (Plecoptera). Obviously, knowledge gained from these studies has helped my fly-fishing.

Around 20 years ago my curiosity started to turn to the world of caddisflies (Trichoptera) but my fly-fishing books had only the briefest of information and I wanted to know much more. From 1993 until 2008 I had the great fortune to fly-fish with various fly-fishing teams representing England in many different countries. During my travels and fishing at these events I have met with anglers from all over the world some of which also had a keen interest in the entomological aspect of the sport. From these gatherings it soon became obvious that, with the adult caddisflies especially, the UK fly-fisherman's understanding was full of huge gaps.

In the spring of 2006 I had a letter printed in Fly-Fishing & Fly-Tying, a popular and informative UK based fly-fishing magazine. In this letter I appealed for help from the readers, I needed them to catch and send me any adult caddisflies they came across whilst out fishing. My idea was then to identify these specimens and create a database of where & when our different adult caddisfly species are on the wing, the aim being to get a better understanding of adult caddisflies and their relationship with the sport of fly-fishing here in the UK. This was the birth of my Adult Caddisfly Occurrence Scheme (not to be confused with the The National Trichoptera Recording Scheme that records both caddisfly adults and larvae – see bottom of page for details).

Since the scheme started I have had many, many thousands of individual adult caddisfly samples sent in and the database has grown steadily. I have also enrolled other "collectors" (who are not anglers); these have included my family & friends and members of various Natural History Societies. To be honest anyone who has shown even the slightest interest has been roped in! This has expanded the areas from which I receive samples to beyond that of the fly-fishing related sites, as a result, an even greater variety of species started to come through.

Each year all the data is sent to Dr Ian Wallace. Dr Wallace coordinates **The National Trichoptera Recording Scheme** that covers both the adult and larval stages of caddisflies and after checking the data he uploads it onto the National Biodiversity Network (NBN) Atlas. I also send the data to The Freshwater Biological Association, the Riverfly Partnership, Buglife (The Invertebrate Conservation Trust), my local natural history society (Sorby), everyone who sends in the samples and anyone else who just asks!

2019 – Review

2019 was a funny old year for collecting adult caddisflies which was mainly down to the very variable and often foul weather. Despite all the challenges my **Adult Caddisfly Occurrence Scheme** still had plenty of sample tubes sent in to be analysed. This gave me the job of having to check over 1,000 individual adult caddisflies, each and every one checked, identified and catalogued. The scheme recorded 94 species during 2019 and all the results can be seen on the two charts following this review. One chart has the *species* listed in alphabetical order and the other chart has the *sample suppliers* listed in alphabetical order (if you have sent in samples then you can see all your data together on this chart). Ninety-four species is a fantastic result and makes it the 10th year in a row that the scheme has recorded over 90 species. A wonderful illustration on the consistent effort year-on-year by everyone who sends in samples.

Other news from 2019 is that two new species were added to my ongoing dataset. These were *Hydroptila valesiaca* and *Setodes punctatus*. The total number of species recorded by the scheme since 2006 now stands at 156. I collected the *Hydroptila valesiaca* while collecting on the delightful Scottish island of Lismore. This expedition was organised by Peter and Sharon Flint, we all added new species for the island's records and also had a lovely time while doing it. The island geology is dominated by limestone which leads to many unusual species - not just caddisflies. The *Setodes punctatus* was a very unusual find and turned up in a moth trap run by John P. Martin in the Shrewsbury area. The species does turn up at the larval stage during routine sampling by the Environment Agency in that area but the last time an adult was recorded was back in 2004. This just shows how secretive and difficult to find some adult caddisflies can be. Another great find for me personally in 2019 was *Synagapetus dubitans*; some of you may remember that I discovered this as a new species to the UK, purely by accident, in 2010 while doing some routine collecting with my sweep net. I found this latest sample at Hackfall in North Yorkshire. This is an area I have found the species previously but I have not recorded it anywhere since 2016. However, this species is now turning up in similar habitats in other parts of England (not yet recorded in Scotland or Wales). A perfect example of a species that has been hiding in plain sight, in fact it has probably been there since the end of the last ice age.

The total number of adult caddisflies that I have on my database now stands at 16,244. Each and every one with a location and date of capture plus lots of other interesting information. All of which is helping my long-term study, and understanding, of these fascinating insects.

During 2019 I once again received very welcome support from the Cressbrook & Litton Fly-Fishers Club (www.cressbrookandlittonflyfishers.co.uk), since 2013 their support has helped me greatly with increasing postal charges and the costs of sample tubes.

Last, but by no means least, a huge thank you once again to everyone who has sent in samples, not just this past year but way back to 2006. Without you the scheme simply would not exist. And, also my very sincere thanks to Aki Rinne (Finland), Dr Ian Wallace and my very good friend Andrew Dixon, to name but three, their help and support is vital to all my work.

Stuart Crofts,

February 2020, Penistone, South Yorkshire.

Adult Caddisfly Occurrence Scheme Records 2019

Caddisflies are listed in alphabetical order. When more than one sample of a particular species has been found they are listed in "date caught" order

Genus	Species	Location	NGR (where known)	Date	Determiner	Name of Sample Supplier	Brief Notes (when taken)

Adult Caddisfly Occurrence Scheme Records 2019

In this chart the sample suppliers are shown in alphabetical order. If you have sent in samples you will find all your results together here. These are then shown in "date caught" order

Genus	Species	Location	NGR (where known)	Date	Determiner	Name of Sample Supplier	Brief Notes (when taken)

Stuart Crofts Adult Caddisfly Occurrence Scheme

Adult Caddisfly Collecting Notes

If you get any adult caddisflies (but not the larvae) just put them live into a tube. As soon as possible put this into a domestic deep freeze for about 2 or 3 minutes. This is considered a humane way to immobilise/kill an adult caddisfly, but **please** don't leave them in too long as they will fall apart! Next, fill the tube with either neat vodka (or similar clear spirit such as gin), or a 50/50 mix of isopropyl alcohol and water, any of these will preserve the caddisflies until they can be identified. However, please do not use neat isopropyl alcohol, meths or surgical spirit in any form, all these will desiccate a caddisfly making it very difficult to work with while I am trying to confirm its identity.

Write on a small slip of paper (see "Helpful Hints & Tips") in pencil, *where* (the approximate location) and *when* (the *time* & date) you caught the sample along with your *name*. Put this in the tube with the caddisfly samples (alcohol will have no effect on either the paper or writing in pencil). Please do not stick a label on the outside of the tube, as these often just fall off, or write on the outside of the tube which makes it easier for me to reuse them.

Drop the tube back in the post to me with your name and address along with any other notes of interest on the capture. When that arrives I will then post back an empty tube for the next caddis you find ☺. You can put the tube in any type of strong envelope (they do not need to be padded), the tubes are very tough and will not leak. You will need to put, at the very least, a "large letter" stamp on the envelope due to its thickness with a tube enclosed, **but, if in doubt** get the package checked at the Post Office before sending.

I do not get much chance to analyse samples until the long winter evenings, hence the reason to preserve them in alcohol.

You can expect many different types of adult caddisfly to be on the wing from March to November. They range in size from 3mm to nearly 30mm and we have 200 very varied species, most are found near water but they can turn up anywhere, some are very common and others incredibly rare. So, even if you only think you have one send it along for me to check. Additionally, don't worry if you think you have caught the same type twice, again please send it along, this information is useful for the "flight period data".

At the year-end and after all the samples have been identified I will put together an annual review. A copy of the review and data will then be sent to you, from this you will be able to see the species you caught and sent in.

Helpful Hints & Tips

Sample of an "information slip" to put inside a tube with specimens:

River Trent, Newark, Notts. NGR SK 792 536 0900hrs 04 July 2020, Fred Smith
--

You can put up to three or four individual caddis (dependant on size) in one tube as long as they are from the same location on the same date. Do not forget to use pencil on the paper information slip, ink dissolves in alcohol!

National Grid Reference (NGR)

It is preferable to send along a six (or better still ten) figure National Grid Reference (NGR) along with the approximate sample location name.

To check you have worked out more-or-less the correct locations of a sample you are sending there are now very good websites available. Here is one that I find very useful to check locations online:

<https://osmaps.ordnancesurvey.co.uk/>

This is free to use but you can subscribe to get full access to all the features.

Lastly, with any samples you collect, I would appreciate it if you can get them back to me as soon as you can and no later than the end of November. This gives me at least a couple of months to do sample analysis before a new collection season starts in the spring of the following year.

Thank you for your help.

Stuart
